Palm Beach County
Local Road Safety Plan Development
Workshop

Moving Towards **ZERO** Deaths

**Why is this workshop important?**

Despite efforts in the past, Palm Beach County has averaged over 150 fatal or severe injury crashes per year between 2011 to 2014. We need your help to reduce these numbers and move Florida toward zero deaths.

**Why is your participation needed?**

The objective of the workshop is to enhance Palm Beach County local road safety efforts. Through group discussion and review of the results of a data-driven analytical process, participants will work to address severe crashes in the county.

During the workshop, a set of potential safety countermeasures will be presented and prioritized via a voting process that will become the foundation of efforts to reduce the number of local road fatalities and life changing injuries within Palm Beach County.

**Critical Emphasis Areas Being Discussed:**

- Lane Departure Crashes
- Impaired Driving
- Pedestrian and Bicyclist Crashes
- Intersection Crashes
- Unrestrained Occupants
- Aging Drivers

The County Road Safety Plan will be developed by representatives of the 4 E’s:

**Engineering – Enforcement – Education – EMS**

**Palm Beach County Local Road Safety Plan Development Workshop**
